Ask me about a medical treatment or condition.

Ask me about a medical treatment or condition.

6 years old has 104 fever

A fever of 104 degrees Fahrenheit in a 6-year-old child is considered high and may indicate an underlying infection or illness. It is important to monitor the child's symptoms and seek medical attention if the fever persists or is accompanied by other concerning symptoms. Providing the child with plenty of fluids and keeping them comfortable can help manage the fever.

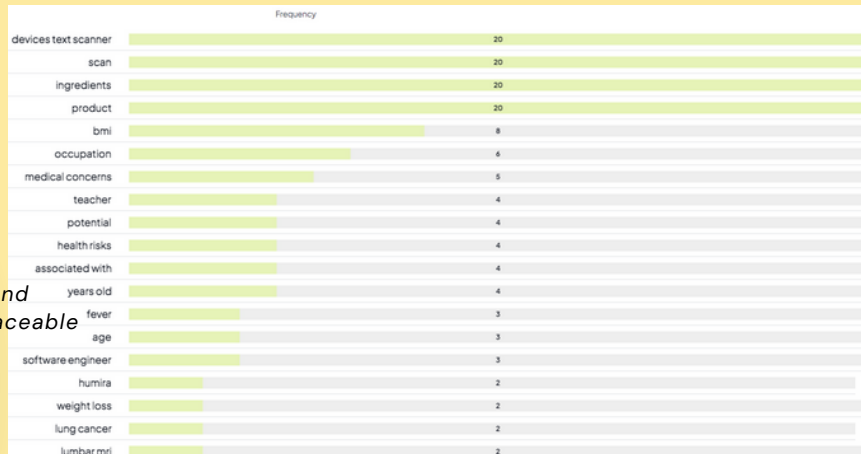

Is prior-authorization required?
Will my claim be denied?
What are the approval criteria?
What other symptoms does the child have?
Has the child been vaccinated?
Has the child been exposed to any sick individuals recently?

Has the child been vaccinated?

Vaccination is an important aspect of a child's health. It helps protect them from serious
